

### Git Assignment 1

**This is an individual assignment. No late work allowed.**

**20 pts**

**Due Mon Jan 13, at beginning of class**

Complete the tutorial at <https://product.hubspot.com/blog/git-and-github-tutorial-for-beginners>. Note the following modifications to the tutorial:

1. Do all of the steps using the git command-line commands given (as opposed to using GUI commands in your tool...we will practice using your tool's interface to git later).
2. Prior to starting step 6, you must do the following: While still on the new-branch, make a change to the content of the text file and save it. Stage the file, then commit it.
3. At step 6, when you create the github repo, you must name the repo using your actual name (e.g., "BillSmithIntro").
4. *At the end of the tutorial*, add me as a collaborator to the github repo. Do this by clicking on the Settings tab, then select Collaborators (left hand side of page). Search for **OCPProfHarbert** and add me as a collaborator on your project. **You must add me to your finished github project prior to class time on the due date.**
